

A Question from the People in Power, Education and Pakistan

**Ibrahim Khan**

University of Okara, Okara

**Abstract**

The situation of education and higher education in the Islamic Republic of Pakistan is not hidden from the conscious (now even the unconscious knows the importance of education). Although the quality is excellent, on the other hand the situation is not so bad. There was a time when Pakistan had a golden chapter in the promotion of higher education. Which was also recognized at the global level. Many new institutions were opened at the level of academies, universities and colleges. Scholarships abroad have been promoted as much as possible. At the same time, there was a surprising increase in the resources of the institutions, especially the big ones. And the institutions started to stand on their feet. But! The education sector in Pakistan has never deserved special attention from the rulers. Until half a century ago, the situation was that when the cabinet was formed, no one was ready to take over the portfolio of the education minister. What is the importance of curriculum in a country where the education sector is not remarkable and noteworthy.

**Keywords:** rivalry, regular day to day existence, style, news-casting, way of life, job, administration, travel.

## **Introduction**

The situation of education and higher education in the Islamic Republic of Pakistan is not hidden from the conscious (now even the unconscious knows the importance of education). Although the quality is excellent, on the other hand the situation is not so bad. There was a time when Pakistan had a golden chapter in the promotion of higher education. Which was also recognized at the global level. Many new institutions were opened at the level of academies, universities and colleges. Scholarships abroad have been promoted as much as possible. At the same time, there was a surprising increase in the resources of the institutions, especially the big ones. And the institutions started to stand on their feet. But! The education sector in Pakistan has never deserved special attention from the rulers. Until half a century ago, the situation was that when the cabinet was formed, no one was ready to take over the portfolio of the education minister. What is the importance of curriculum in a country where the education sector is not remarkable and noteworthy.

## **Literature Review**

The question is open, but who has time to think? In the country where millions of people are deprived of the basic need (bread, cloth, house). Suicide is common, can education feed them? In such a situation, they forget even Allah and prefer forced and forbidden death to life. The allocated budget for higher education is used elsewhere. From which the rightful are deprived. The ship of knowledge is tossing in the whirlwind. Those who have a fertile heart and earth are spreading poison in their body instead of blood and its roots are hollowing out their existence. The generation is being destroyed. The creations of fertile land are the basis of development, barren hearts and minds show the way to destruction and destruction. Even now, if the rulers do not pay attention to education and this best policy, even the unsanitary travelers will not be able to reach their destination. Ten years ago our higher education penetration was 23%. Which has now reached 45%. While in the neighboring country it is

from 22% to 68%. About 2 crore young generation of our beloved country is wandering in the forest. No one is ready to take valuable capital worth millions.

The heart is crying tears of blood over the state of education in the Kingdom of God. Our supreme leader. Politician, intellectual writer, religious leader. Teachers, Federal and Provincial Governments, Department of Education, Text Book Board and Curriculum Committees. Who should I mention? Or Lord of the worlds, show our shepherd the straight path. So that we can reach our goal. To be able to follow a national motto. Choose a straight line, separate national and provincial lagunas. Stick to a syllabus. The results of the four systems of education, Sener Kimraj, Urdu medium, and English medium have crippled the nation. It caused national chaos. And mental distraction increased blood pressure. Whom to ask for help so that education can show us the right path of knowledge. Who will move forward? People of authority and power, grow up, lest the flood of illiteracy move towards you. Brick by brick of the raw dear homeland. Somewhere, the collar of disgrace will be humiliated and humiliated. Save the country not power and the only way to save the country is focus on education. For God's sake... pay attention

To illuminate education, only passion is needed and remember that passion is not beautiful by throwing empty colors on the canvas, a complete form expresses its beauty! If you get hurt while performing your duties, then you will see the pleasure of that wound and the end will be good.

Suspected drug reactions in Laho have increased the number of deaths. These medicines were used to treat heart diseases. The number of patients taking these medicines can be more than 25 thousand.

Experts believe that 25 percent of people living in Western countries suffer from high blood pressure. This research has been done at the University of Maryland, USA. Dr. Alan Scholdener of the University of Maryland said about this research that this discovery can help us find out which people are at high risk of high blood pressure and will also help in the treatment of the disease. In the same

way, genes have a great relationship in the health and happiness of a person. There are many people in America and Europe who are forced to commit suicide due to some memories of their childhood, all this is due to changes in genes and such a sick person can be treated thanks to the same genome.

Hussain Haqqani, the alleged protagonist of the controversial memo, Pakistan's former ambassador to the US, has been allowed to leave Pakistan, the Supreme Court has ruled. According to analysts, the severity of the Memogate scandal has started to decrease in view of the reduction in tension between the Islamabad administration and the army.

### Conclusions

The lords of power have to apply reverse gear. That the blind imitation of the West is only a pit of destruction and nothing else. We have to take care of the deprived and helpless people. My time as a student is not very old. But whatever it was, the government schools were giving such quality education that I had to pick up the pen today that the quality definitely shows itself and if I look at the time of my elders and parents, what is the matter that even today people of their generation are political, Official, educational, scientific, industrial, judicial and literary, but still shining like a star in the sky. A long list of them are trained by the same institutions. I wish the rulers don't see their educational buildings becoming ruins, their strong foundations need water, give them their share of water, or any silt water will make them a storehouse (how many buildings have become storehouses now). Restore the lost glory of God. If the candle of condemnation of the poor is bright in the heart, then it is the best source of light.
